✅ **CONFIGURATIONS Section**

A third section that you may see on the **Configuration Field Settings** page after **VARIABLES** and **CONFIGURATION SETS** is the **CONFIGURATIONS** section.

This section lists the different Configurations that are automatically generated from Configuration Sets. Based on this list, a Site Admin can choose to omit certain Configurations from being tested.
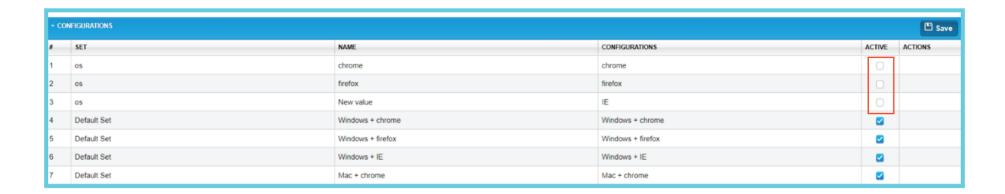

For example, if you are testing the OS + Browser Configuration Set, the individual Configuration for **Windows OS + Safari Browser** can be omitted.

✅ **Remove a Configuration**

To remove a Configuration, perform the steps listed:

1. In Site Administration, select the **Configuration Field Settings** tab

2. In the **CONFIGURATIONS** section of the page, locate the **Active** column and deselect the applicable check boxes associated with the items for which you do not want a Test Run

3. Click on the **Save** button

#	SET	NAME	CONFIGURATIONS	ACTIVE	ACTIONS
1	os	chrome	chrome	☐	
2	os	firefox	firefox	☐	
3	os	New value	IE	☐	
4	Default Set	Windows + chrome	Windows + chrome	☑	
5	Default Set	Windows + firefox	Windows + firefox	☑	
6	Default Set	Windows + IE	Windows + IE	☑	
7	Default Set	Mac + chrome	Mac + chrome	☑	

✅ **Conclusion**

Once the Configurations are modified at the Site Admin-level, you can test them at the Project-level.
